

soifood

AI-Powered Street Food Discovery for Bangkok

“The best meal of your trip is out there. Now you can find it, order it, and never forget the person who made it.”

Project Summary

soifood helps Bangkok street food vendors create an instant English digital presence using AI.

Through a simple onboarding flow, vendors receive:

- AI-generated English profiles
- Bilingual Thai-English menus
- Shareable vendor microsites
- Printable QR cards
- Community-driven check-ins and reviews

The platform helps tourists and expats discover authentic local food experiences while supporting small local vendors who typically lack online visibility.

Built for the **SEABW Bangkok Hackathon 2026**.

Problem

Many Bangkok street food vendors:

- only have Thai menus
- lack websites or online presence
- are difficult for tourists to discover
- cannot easily communicate with international customers

As a result, authentic local food experiences are often missed by visitors.

Solution

soifood uses Gemini AI to transform simple vendor onboarding data into:

- structured bilingual menus
- English vendor stories
- mobile-friendly vendor pages
- QR-enabled digital discovery

The platform also includes a unique “**Living Portrait**” system where community check-ins continuously shape the vendor’s story over time.

Key Features

- 🇹🇭 AI bilingual menu generation
- 🤖 AI-generated English vendor profiles
- 📍 Shareable vendor microsites
- ❤️ Community check-ins
- 🎭 Living Portrait storytelling system
- 📄 Printable QR cards
- 🗣️ Thai text-to-speech ordering
- 🔒 Privacy-first phone hashing

Technical Highlights

- FastAPI + Supabase backend
- Gemini 2.5 Flash-Lite integration
- No-build frontend (Jinja2 + Tailwind CDN + vanilla JS)
- Client-side ordering flow
- Cache-aside AI profile generation
- Dockerized deployment on Render

Technology Stack

Layer	Technology
Backend	FastAPI
Database	Supabase PostgreSQL

AI Gemini 2.5 Flash-Lite

Frontend Jinja2 + Tailwind

Deployment Docker + Render

Why This Matters

soifood is designed to help small local vendors become digitally discoverable without requiring technical knowledge, expensive platforms, or marketing resources.

The project uses AI not to replace human connection — but to help preserve and amplify Bangkok's street food culture for a global audience.

Hackathon

Built by [Rahul Ravikumar](#) for the **SEABW Bangkok Hackathon 2026**
